Archive completeness control

More security through regular control of all documents to be archived in your SAP system

Archive transfer

DMS transfer

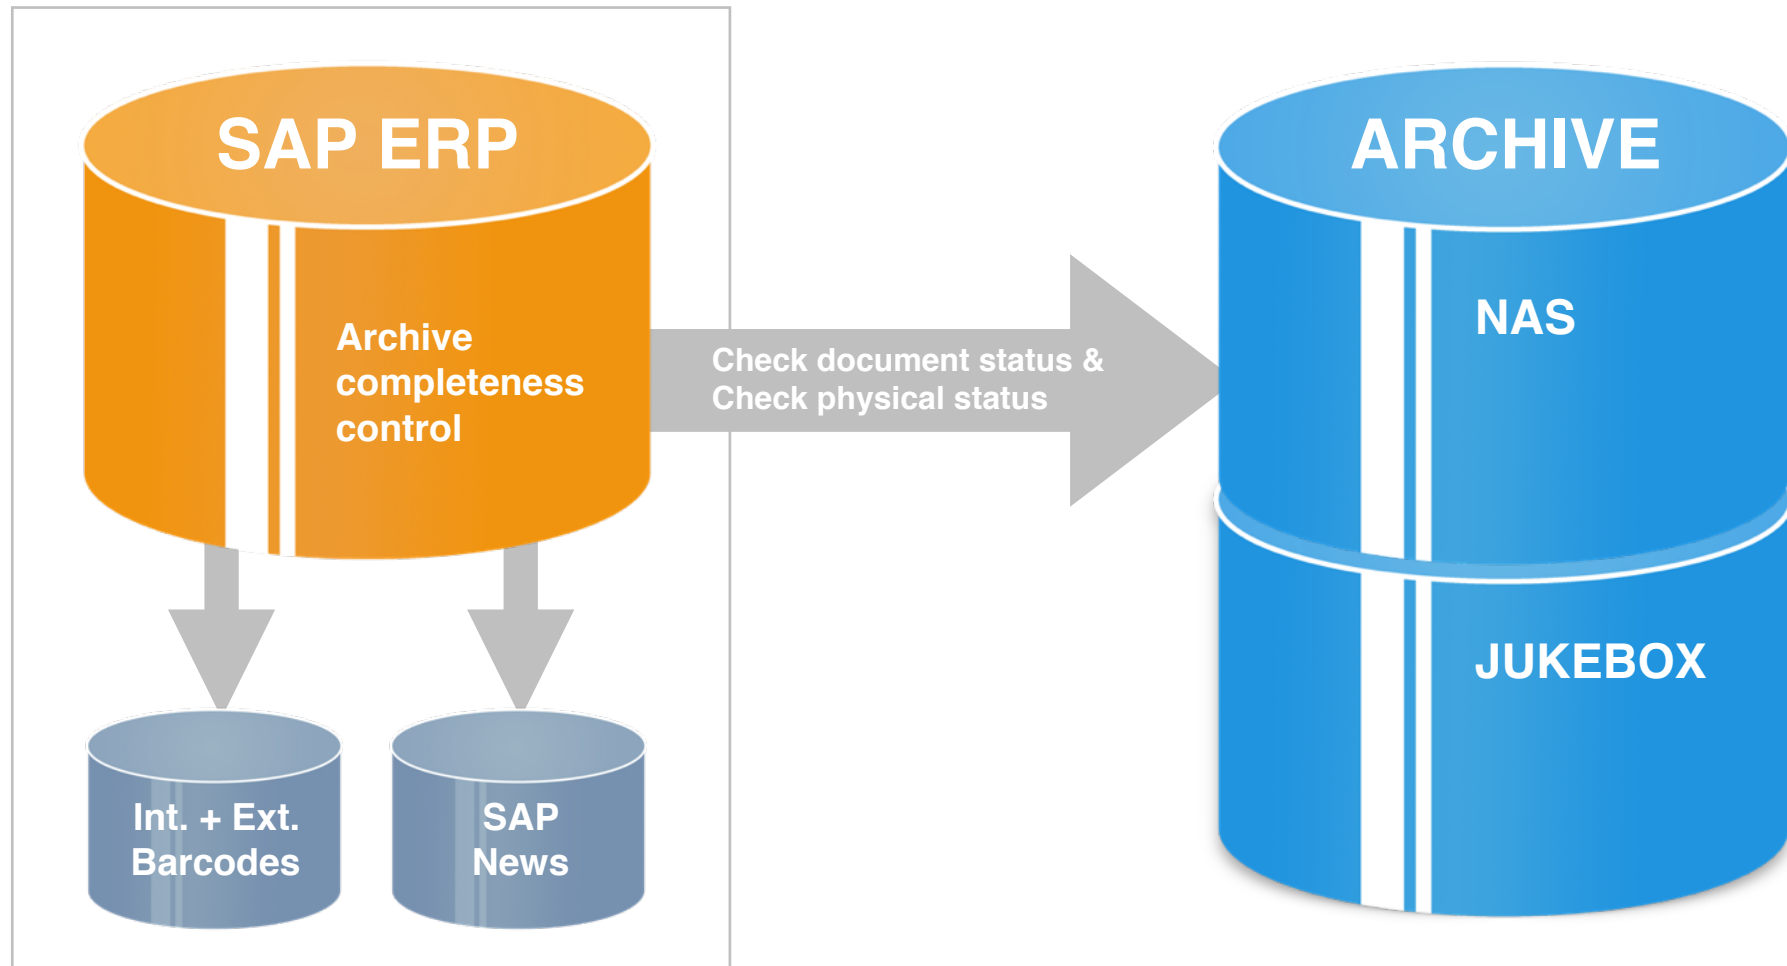

ArchiveLink module

Upload module

Connect module

SCHEMATIC DIAGRAM of archive completeness control

HIGHLIGHTS

YOUR ADVANTAGES AT A GLANCE

- You can check whether all documents to be filed from the SAP ERP system have actually been filed
- Customizing settings of SAP ERP, including business objects and message control, are read by the programme and all documents in SAP ERP to be filed in an ECM system are checked
- The documents in the archive can be accessed to ensure that they are still available and useable
- You can check whether there are any technical defects that will otherwise be detected at a later time if important documents have not been correctly filed
- You can check whether documents and barcodes have actually been scanned
- Even long-term media are checked to comply with the statutory retention periods
- Errors in customizing for the ArchiveLink can be detected easily
- Errors are responded to in good time

Options

Check data Monitor protocol

Further options for archive check

- Check document in archive
 - Try to read documents
 - Only check failures again
 - Only new and unchecked data
- Customizing & Message Check
- Barcode checks

TECHNICAL DETAILS

- Checks whether all documents to be archived have actually been archived using the message control function
- Is independent of the ECM system by using the standard SAP ArchiveLink
- Allows variants in batch jobs to be checked regularly
- Delivery in the /VBGMBH/ namespace per transport order

REQUIREMENTS

- SAP ERP ECC 6.0 EHP2 or later
- Archives must be linked using the ArchiveLink
