DMS transfer

ArchiveLink module

Upload module

Linking documents using SAP business

Connect module

Index and master data download

ECM viewer

Extension of Generic Object Services (GOS)

Barcode extension

SCHEMATIC DIAGRAM of upload module

HIGHLIGHTS

YOUR ADVANTAGES AT A GLANCE

- The document upload runs as a module on the Varelmann Content Server and picks up documents from the ECM system that are to be reported to an SAP business object without any barcode scenarios
- During upload, a workflow can be started in the SAP system or a workflow item can be generated (as a result of which the OAWD transaction is made redundant)
- Based on the information provided, the document upload checks whether documents to be reported to the SAP ERP system have been filed in the ECM system; the file format is of no importance
- The archives are monitored periodically, and the documents that are found are reported to the SAP ERP system using the standard interface of the ArchiveLink
- Documents can be easily transferred to the SAP ERP system
- Any number of documents can be transferred to the SAP ERP system
- Used wherever a barcode scenario cannot be reasonably used

TECHNICAL DETAILS

- Any electronic files can be linked to any SAP business objects
- Communication with the SAP ERP system using the RFC interface
- Delivery in the /VBGMBH/ namespace per transport order

REQUIREMENTS

- SAP ERP ECC 6.0 EHP 2 or later
- Tomcat Server version 6.x or later
